PROFESSIONAL EXPERIENCE

Dayforce

Toronto, ON

Software Developer III

Nov 2023 – Now

- Redesigned database architecture to centralize transmission settings by normalizing JSON-based configurations into dedicated relational tables, eliminating schema inconsistencies and simplifying API surface across the platform.
- Developed a Kafka-based Event Triggering Connector enabling customers to automate Payroll Data Export workflows, extending Integration Studio's real-time event-driven capabilities.
- Addressed advanced pipeline features including Nested Filtering, Field-Based Grouping, and Data Transformation to support complex enterprise integration scenarios.
- Contributed to an in-house Integration Descriptive Language (IDL) library in C#, distributed as a NuGet package across the flagship codebase as the core abstraction layer powering Integration Studio's connector pipeline.
- Optimized the unit test suite, reducing overall execution time by 30% and improving CI pipeline throughput.
- Improved front-end validation and error messaging in React and TypeScript, reducing user configuration errors during integration setup.

Software Developer II

July 2022 – Nov 2023

- Played a key role in launching Integration Studio, a low-code middleware product with 150+ pre-built connectors for inbound/outbound HR, payroll, and benefits data integrations — contributing to a 23%+ increase in the customer base.
- Delivered 30+ features and resolved 8+ critical patch items within a 6-month window, maintaining an 82% bug-free rate.
- Led front-end development efforts, owning 62% of tasks in the front-end repository using React and TypeScript.

industrious CRM

Pickering, ON

Junior Developer

Sep 2021 – June 2022

- Built and deployed the internal ZAP QA application, used across multiple client organizations for quality assurance workflows.
- Configured data schema and executed a mass data upload for a pharmaceutical client with 24K+ accounts.
- Implemented an automated Salesforce record generation feature by parsing JSON from the Motinsight API, eliminating manual data entry and improving customer experience.
- Executed and evaluated 50+ test cases for a University Health Network project delivery.

PROJECTS

ReelMark – Movie & TV Tracking App | *React Native, Node.js, TypeScript, Docker, Azure*

Feb 2026

- Built and deployed a full-stack mobile app for tracking movies and TV shows with AI-powered recommendations via the Anthropic API and real-time search across 600K+ titles through TMDB integration.
- Designed a layered RESTful backend (Routes → Services → Prisma ORM) with session-based authentication, bcrypt hashing, and strict per-user data scoping across all endpoints.
- Containerized the backend using Docker and Docker Compose; deployed to Azure Container Apps via Azure Container Registry with Supabase as the managed production PostgreSQL database.

Database System of International Airport | *Java, PostgreSQL, Shell*

Mar 2021

- Designed and developed a single-server airport management application supporting 10+ airlines and 25+ airports, handling flight booking, seat adjustments, and schedule queries.
- Authored complex SQL queries including recursive queries and subqueries to extract flight information with optimal performance.

EDUCATION

University of Toronto, St. George

Toronto, ON

Bachelor of Science (Hons.) in Applied Mathematics, Major in Statistics | Distinction

Sep 2017 – June 2021

Relevant coursework: Advanced Calculus, Data Structures, Databases, Graph Theory, Nonlinear Optimization, Partial Differential Equations, Probability, Real Analysis, Stochastic Process, Software Design, and System Design

TECHNICAL SKILLS

Languages: C#, Java, JavaScript, SQL, TypeScript

Frameworks & Tools: Azure, Azure Container Apps, Docker, Express.js, Git, Kafka, Prisma, React, React Native

Cloud & DevOps: Azure Container Registry, Azure DevOps, CI/CD Pipelines, Docker Compose, Supabase
